

The second training within the Module 1, took place in Pancevo, on June 4<sup>th</sup> and 5<sup>th</sup>. The Module's topic *"Contemporary teaching, learning and instructional materials"* was adapted to the learning needs of new group of 30 participants, teachers coming from different fields, such as chemistry, agriculture, food production and processing, geodesy. This group of teachers share the majority of the problems related to instructional material as teachers of electro engineering sector from Nis. Teachers were very active in solving different tasks during the seminar, discussions were fruitful and evaluations are very positive. We believe that the first steps in building the project community are successfully accomplished.
