

# WEBINAR

## Teaching for green societies: skills and practical experiences

3 MAY 2023, 14:00 – 16:00 CET

ONLINE

Organized by the ETF Community of Innovative Educators in cooperation with the ETF GRETA network

---

### SUMMARY:

The climate change emergency requires decisive and ambitious action in a range of policy areas, including education and training. Sustainability should be part of the entire spectrum of education and training, including for curricula and professional development for educators, as well as buildings, infrastructure and operations.

Educators are called to play the key role of equipping learners with the competences needed to shape a more sustainable economy and society, in a transformative and interdisciplinary fashion, and to take action to enact lasting, structural change.

The webinar, organised by the ETF Community of Innovative Educators in collaboration with the GRETA network (Greening Responses to Excellence through thematic actions), will present some practical approaches and methods to build green skills and attitudes among learners, and will foster a discussion on what needs to happen for educators to become key change-makers for sustainable societies.
