highest quality, and we are learning
and improving continuously

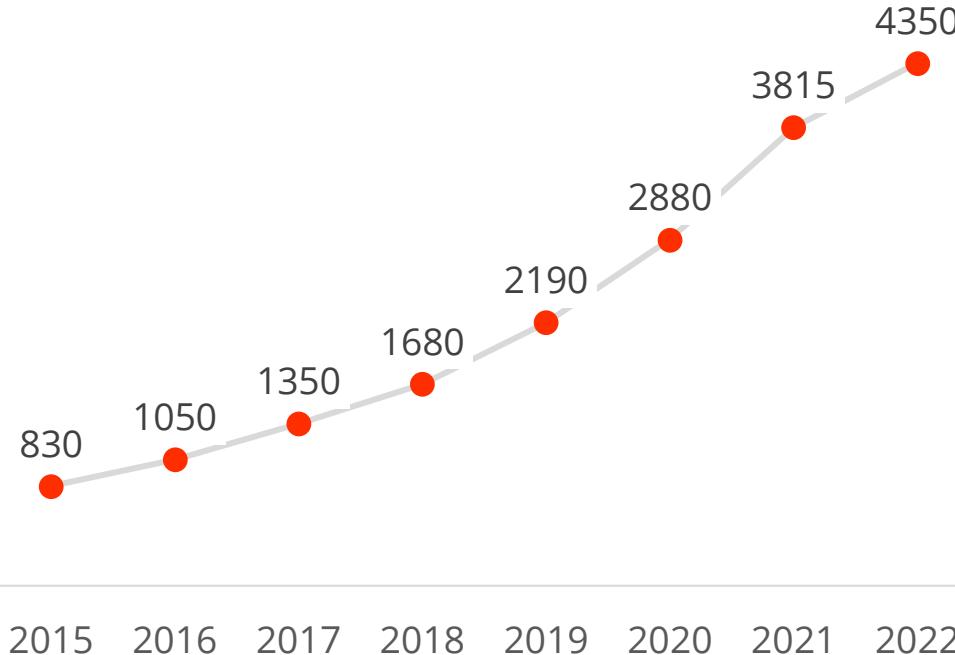

Core values

We **develop the future** – We deliver **outstanding work** – We **collaborate** – We are **continuous learners**

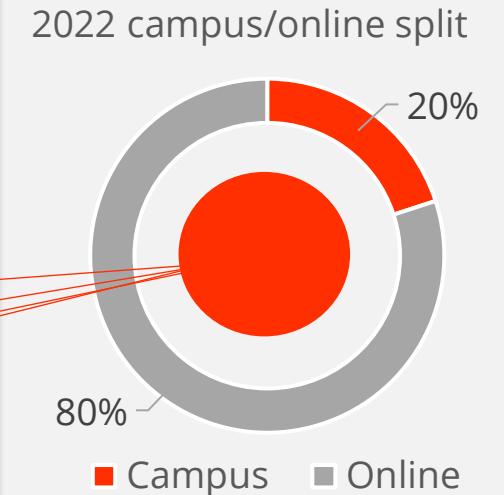

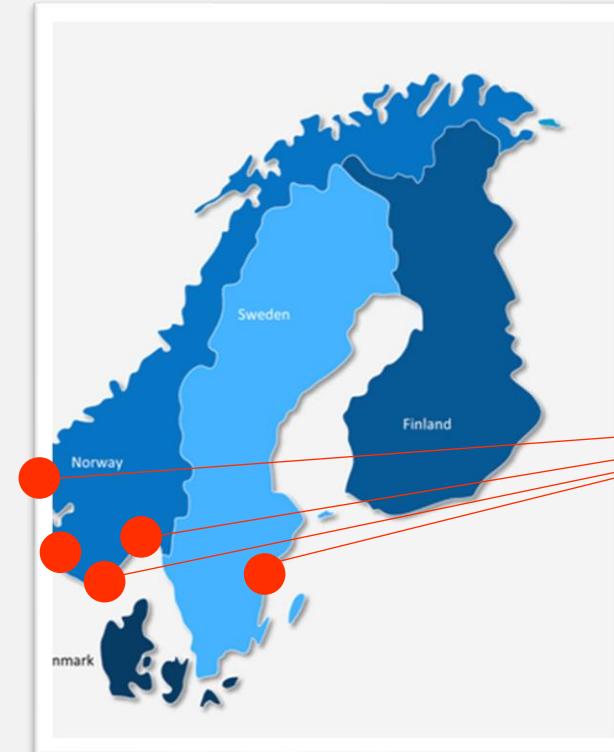

We give thousands of students employable education

Student population (2015 - 2022)

We continue to deliver accessible education to everyone

In 2019, Noroff Accelerate partnered with Manpower Group to establish the Experis Academy.

Since being established, Experis Academy has grown to become the preferred onboarding and reskill platform in the Nordics and together we deliver on average, 20 courses per year and have reskilled over 1,000 working professionals across many industries.

Onboarding boot camps and reskilling courses are delivered through on-campus or online classes which are fully managed by a Noroff Accelerate SMEs.

Course Delivery Models

12-week Onboarding Boot Camp

Curriculum:

- Java Script Front-end (4 weeks)
- Java or .NET Back-end (4 weeks)
- Full Stack Case Review (4 weeks)

4-week Boot Camp

Curriculum:

- Full Stack Development – Java
- Case Review

Experis Bespoke Modules

Noroff has delivered a range of bespoke courses tailored to the needs of Experis and its clients – courses covering Embedded Development, Data Analytics, Project Management and E-Commerce.

Noroff Accelerate

SCANIA

As in most other industries, technology is playing an increasingly important role in the production of vehicles, and recruiting sufficient IT skills is not easy. The reskilling program in Scania aimed to train employees from different parts of Scania to become IT developers.

Scania, in collaboration with Noroff Accelerate, created a program where the participants went through an intensive 12-week boot camp and then applied their newly acquired skills in various teams in Scania IT.

The program was a great success, and all 12 participants today work as IT developers in the business.

Full Case Study can be found here - [Noroff & Scania](#)

Front-end Course Overview

Learning Outcomes:

- Develop and style static web pages using HTML & CSS
- Plan and design responsive web pages using Figma & Bootstrap
- Add interactivity to web pages using vanilla JavaScript
- Serve HTML, CSS, and JavaScript files using Node with Express
- Compare and contrast modern front-end development frameworks React and Angular
- Create a Single Page Web Application using React

Back-end Course Overview

Learning Outcomes:

- The fundamentals of the C# language
- How to design your codebase to be testable and maintainable
- How to provide data persistence for applications using Entity Framework Core
- Web API development using ASP.NET Core and C#
- Secure Web APIs using modern approaches
- Deploy Web APIs to a cloud environment with containers

Digital transformation is the driving force of our strategy

Digital transformation changes education in two fundamental ways:

What we teach

New technologies create demand for **relevant** and updated study programs, driven by the requirements from industry, existing workforce and future job seekers

How we teach

Digitalization brings new opportunities to enhance the **learning experience** and provide **flexibility** to students in all phases of life – ensuring lifelong learning opportunities for all

How we respond:

Employability

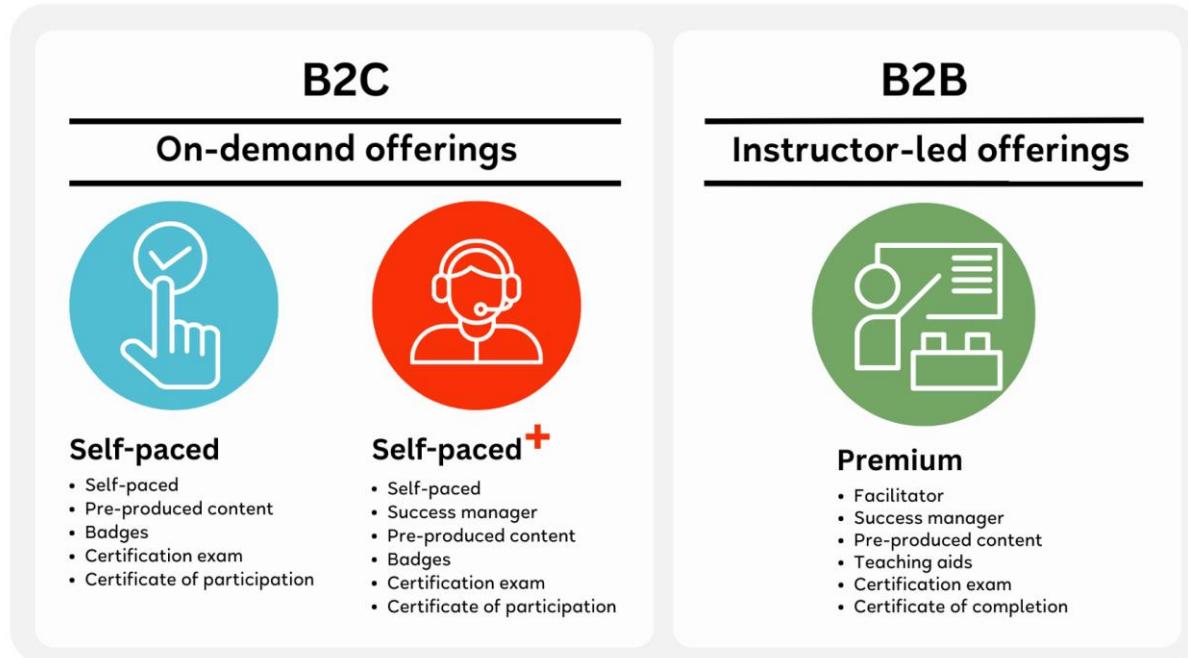

Our courses are developed with and for industry, focusing on tech and digital competencies

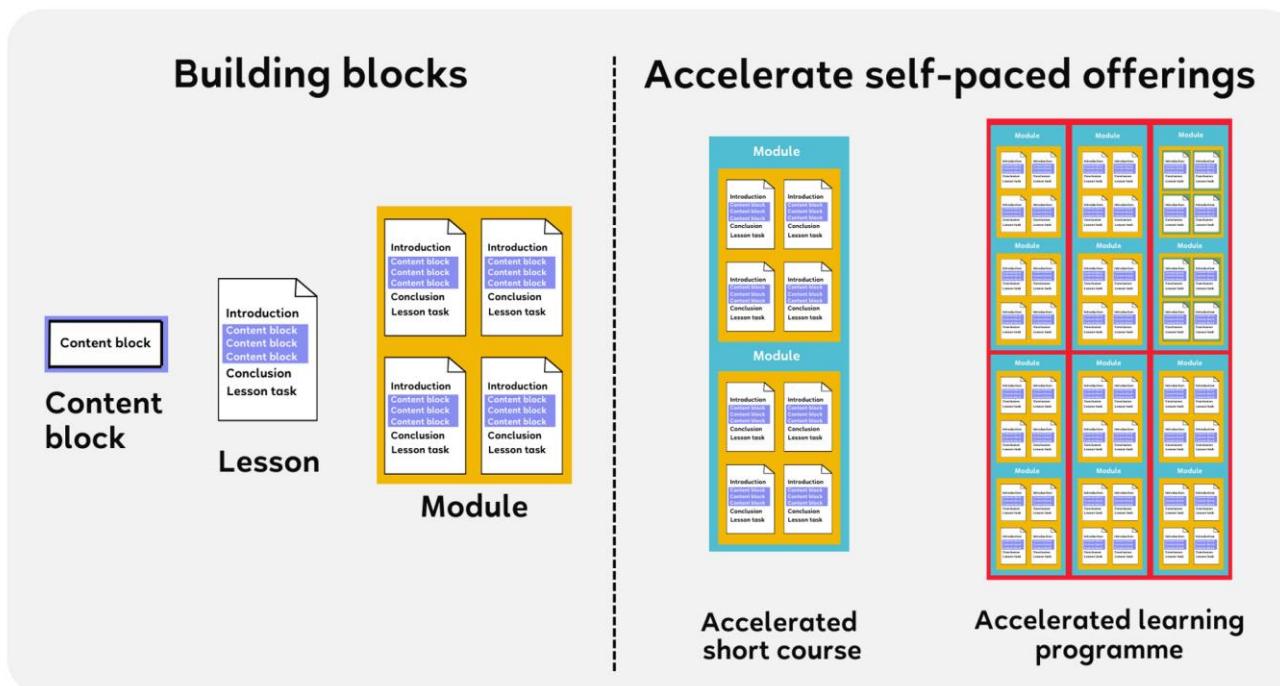

Student Experience

We cater to people in all walks of life, providing our students with motivating teachers, digital tools and a supportive learning community

Clearly defined products – everything is made online first

Set structure for content

Moving forward – what are our next steps
